About Us

Headquartered in Switzerland, KAPHS is a leading supplier of **high-end architectural products**. Since its founding in 2003, Kaphs has achieved considerable success through the provision of speciality architectural products in Europe, the Middle East, North Africa and South East Asia. KAPHS has built a global network of partners including architects, designers, engineers, manufactures and contractors. This allows KAPHS to ensure exclusive access to innovative products such as Kaplux, Lumière and Lumière Lux, all developed by KAPHS.

Lisus Architectural Hardware Systems

Acquired by Kaphs SA in 2016, Lisus Technology Pte Ltd has pioneered the design, engineering and manufacturing of **architectural stainless-steel fittings** for close to 40 years. LISUS guarantees original designs, excellent workmanship, competitive pricing and a personal customer experience.

LISUS provides a wide range of quality **engineered frameless glass systems** for canopies, balustrades, facades, pool fences and sliding doors.

LISUS[®]

Spider and Point Fixing Systems

With a keen eye for design, the **C-SERIES** Concealed Spider Fitting marries functionality with elegance. Three decades as innovators in this field has allowed **LISUS** to produce a product that puts a refreshing spin on spider fittings for frameless glass facades and walls. Its curves defy the standard design blueprints of a spider fitting while neatly concealing the bolts that hold the clamps in place. A Hole Finder minimizes inaccuracies and makes for a perfect fit every time.

Spider and Point Fixing Systems

The **CX-SERIES** is a refined and technologically innovative structural glazing system that offers total freedom of design by exploiting the simplicity of the three-dimensional format. Components are here used to create a minimalist solution for a glass facade.

Spider and Point Fixing Systems

Lisus PF-Series

The main façade glass panels are suspended from a beam or slab by means of concealed clamps. Lateral support is provided by tempered glass fins of various design, thickness and configurations, independently clamped to the structure, while allowing for differential movement against the main glass facade. A high span façade requires the glass fin to be installed in sections held together by stainless steel splice joints. Three variants of the joints are available.

Spider and Point Fixing Systems

Lisus PF-Series

The main façade glass panels are suspended from a beam or slab by means of concealed clamps. Lateral support is provided by tempered glass fins of various design, thickness and configurations, independently clamped to the structure, while allowing for differential movement against the main glass façade. A high span façade requires the glass fin to be installed in sections held together by stainless steel splice joints. Three variants of the joints are available.

Tension Cable and Rod Systems

Lisus Cable Truss System

The **Cable Truss System** is formed of 2 single-strand Stainless Steel pretension cables, tied to the building structure via turnbuckles and fork-ends required for fixing and tensioning. Their connection to a tubular structure and the **G-CLAD** glass fittings provide a controlled degree of freedom: the glass and the cable truss can move independently, while maintaining lateral support to the façade under wind load. The integrity and stability of the glazed panels are ensured by cables, arranged horizontally and fixed back to the main structure.

Tension Cable and Rod Systems

Lisus Tension Rod

The **Tension Rod** structure is employed by a vertical plane, utilizing propriety stainless steel tensioning fittings, cross bracing, and the **G-CLAD** clamps. This form of structure provides the required lateral load bearing support to the main façade, with its distinctive architectural effect, due to the reliance of tensioning between the beam at the top and the floor slab.

U-Series Railings & Balustrades

Lisus D&F-Series Spigots

D&F-Series Spigots are designed and developed to suit a wide variety of balustrade systems. They are commonly used in commercial and residential installations and can be combined with the **U-SERIES** bracket to form a complete balustrade system. **Applications include:** interior glass balustrades, frameless pool fencing and hand railing systems.

Canopies

Lisus Single Canopy

The **Single Canopy** is an aesthetically pleasing modern design that abides by LISUS's primary goals: minimalism, functionality and affordability. It operates on very few fittings to provide a structurally sound, easy to install glass canopy. Well-engineered, the **Single Canopy** enables all components to be concealed, producing a clean line and your ideal canopy.
